

Skewness & Kurtosis

	sl_no	ssc_p	hsc_p	degree_p	etest_p	mba_p	salary
Mean	108.0	67.303395	66.333163	66.370186	72.100558	62.278186	288655.405405
Median	108.0	67.0	65.0	66.0	71.0	62.0	265000.0
Mode	1	62.0	63.0	65.0	60.0	56.7	300000.0
Skewness	0.0	-0.132649	0.163639	0.244917	0.282308	0.313576	3.569747
Kurtosis	-1.2	-0.60751	0.450765	0.052143	-1.08858	-0.470723	18.544273

Skewness measures asymmetry, indicating if data tails more to the left or right, with a 0-value representing a perfectly symmetrical distribution. It's explaining the relationship between mean, median and mode.

1. Mean < Median < Mode = Positive skewness (Left)
2. Mean = Median = Mode = Normal skewness
3. Mean > Median > Mode = Negative skewness (Right)

Kurtosis, measures the peakness.

1. Platykurtic (Low Kurtosis) < 3
2. Mesokurtic (Medium Kurtosis) = 3
3. Leptokurtic (High Kurtosis) > 3

Salary: Since its skew value 3.569747 is positive, its skewed towards right. Also, the kurtosis value 18.544273 more than 3, its falls under Leptokurtic (High Kurtosis).

MBA_P: Its skew value 0.313576 still positive, so it skewed towards right side, and the kurtosis value -0.470723 is less than 3, its falls under Platykurtic (Low Kurtosis).

eTest_P: Its skew value 0.282308 is positive, so it skewed towards right side, and the kurtosis value -1.08858 is less than 3, its falls under Platykurtic (Low Kurtosis).

Degree_P: Its skew value 0.244917 is positive, so it skewed towards right side, and the kurtosis value 0.052143 is less than 3, its falls under Platykurtic (Low Kurtosis).

HSC_P: Its skew value 0.163639 is positive, so it skewed towards right side, and the kurtosis value 0.450765 is less than 3, its falls under Platykurtic (Low Kurtosis).

SSC_P: Its skew value -0.132649 is negative, so it skewed towards left side, and the kurtosis value -0.60751 is less than 3, its falls under Platykurtic (Low Kurtosis).
